

Antifouling Solutions

YACHTING

Advanced Eco Marine Coatings

UNIservice proudly presents EcoHull and OptiProp, the latest **eco-friendly antifouling** solutions from the **F2 Eco** line of products by **Ocean Coatings**. Designed to protect your vessels and the environment, these advanced products are complementing our YACHTING line with superior performance and sustainability in mind.

EcoHull

EcoHull is a cutting-edge antifouling solution specifically designed to offer long-term protection **against marine fouling on hulls** and all **underwater surfaces**. This innovative product is completely eco-friendly, eliminating the use of toxins, solvents, biocides, and volatile organic compounds (VOC), ensuring safety for marine life while maintaining superior performance. EcoHull enhances vessel efficiency by providing a smooth, drag-reducing finish that translates to fuel savings and improved speed, making it an ideal choice for environmentally-conscious users seeking sustainable marine solutions.

OptiProp

OptiProp is an advanced antifouling system designed **for propeller protection** and **underwater metal surfaces**. Free from any harmful toxins and biocides, OptiProp leverages a unique foul release technology to prevent marine organism attachment, ensuring optimal propeller performance and longevity. This eco-friendly solution not only protects vital underwater components but also contributes to reduced maintenance costs and improved vessel efficiency. OptiProp is the perfect choice for those aiming to enhance operational efficiency while adhering to strict environmental standards.

Enhanced Solutions

Explore our website for a comprehensive range of enhanced solutions, including primers, degreasers, and cleaners. Our eco-friendly products are designed to ensure superior performance and safety for marine environments. These offerings from our YACHTING line are perfect for maintaining the cleanliness and efficiency of your vessels, complementing the F2 Eco products with their effective and environmentally responsible formulations.

Fouling Freedom

100% Eco & Marine Life Friendly

F2 Eco products are designed to be completely safe for marine life and are free from any toxins, solvents, biocides and volatile organic compounds (VOC).

Improves Performance

F2 Eco provides an exceptional finish to the applied application therefore improving performance, reducing drag and saving fuel.

Long Lasting

F2 Eco products will provide relentless long term performance, our hull coating offers many years protection.

Easy & Safe To Apply

Our products come with detailed instruction of how to apply them.

Competitive Pricing

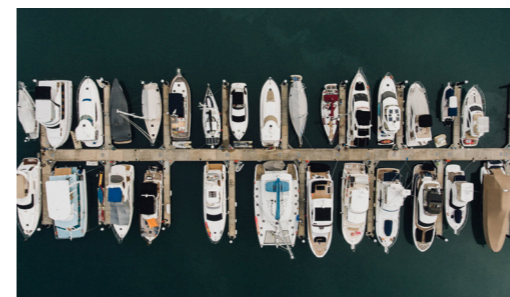

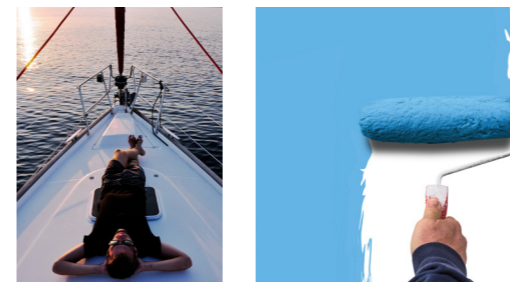

Our competitive pricing structure and long lasting products can offer substantial savings for the end user.

Who We Are

UNIservice has been serving the maritime industry for over 100 years, providing chemical cleaning and maintenance products to cargo ships, chemical/oil tankers, ferries, and cruise ships.

We have recently launched a range of highly effective products for the yachting market. With our strong focus on environmentally friendly solutions, UNIservice YACHTING is proud to partner with Ocean Coatings to offer this revolutionary antifouling solution.

Ocean Coatings was established in 2015, specifically to address the industrial-scale poisoning of the oceans via toxic coatings. Their F2 line is a game-changer, offering eco-friendly coatings that protect both the vessel and the environment.
